Cerbay—Administration and Manufacturing Addition

Wichita Falls, Texas

Cerbay Inc. weaves fiberglass strands into fiberglass mats and they run three shifts around the clock. In the early 90's we completed two other projects with Cerbay. In 1999 they requested that BYSP design a new administration area and a new manufacturing area. The design challenge was to keep the rest of the facility in operation while totally controlling dust and humidity in the existing production area. The new administration area gave them a new image along with expanded space. BYSP also provided a master plan for future growth allowing them the ability to project production more accurately.

Construction Cost: $ 1,035,388

Construction Completed: May 2000

Total Square Footage: 68,729 sf
