## Permian Regional Medical Center & Clinic

Andrews, Texas

Permian Regional Medical Center engaged BYSP Architects to design a new \$55 million, 200,000 square foot, full service acute care replacement hospital with a wellness center and physician's clinic in Andrews, Texas.

The new medical center includes a 37,000 square foot state-of-the-art physicians' clinic for 15 doctors of varying specialties. The clinic is designed for maximum staff utilization and efficiency, with the patient's care and comfort of primary design focus.

The new facility replaced the existing hospital and was built in phases so that day to day patient care was not disrupted.
